

Aim:

Write a C program to create dynamic memory allocation using malloc()

Source Code:**malloc.c**

```
#include <stdio.h>
#include <stdlib.h>

int main() {
    int n,i,*ptr,sum=0;
    float avg;
    printf("Enter the number of integers: ");
    scanf("%d",&n);
    ptr=(int*)malloc(n*sizeof(int));
    if(ptr==NULL)
    {
        printf("ERROR!");
        exit(0);
    }
    printf("Enter %d integers:\n",n);
    for(i=0;i<n;i++)
    {
        scanf("%d",ptr+i);
        sum+=*(ptr+i);
    }
    printf("The sum of the integers is %d\n",sum);
    avg=(float)sum/n;
    printf("The average of the integers is %.2f\n",avg);
    free(ptr);
    return(0);
    // dynamically allocate memory using malloc()

    // calculate the sum of the integers

    // calculate the average of the integers

    // print result

    // free dynamically allocated memory

}
```

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
Enter the number of integers: 3
Enter 3 integers: 1 5 3
The sum of the integers is 9

The average of the integers is 3.00

Test Case - 2

User Output

Enter the number of integers: 5

Enter 5 integers: 1 2 3 4 5

The sum of the integers is 15

The average of the integers is 3.00
